## Your challenges

Have you always been looking for a team that strives for the latest technologies and not only lives the agile values but also successfully implements them with customers? Together with your colleagues, you will develop customized software solutions for our customers. You can contribute your experience to the team as a mentor and lead, as well as to our customers because we work closely with them. We design the lived agile processes together with our customers so that we discuss features together and thus achieve the best result for the end customer.

In addition, we live DevOps! You not only develop features but also take care of build pipelines and other infrastructures with your team.
